

## Appropriate Chews/Treats for your Dog

Products that have the Veterinary Oral Health Council (VOHC) seal are the ideal chew/treat for your pet when used regularly. They can help decrease plaque and calculus buildup that leads to periodontal disease in your pets.

- Premier™ Busy Buddy®
- Premier™ Tug-o-Jug®

The key to management of periodontal disease, also called gum disease, begins with a professional evaluation by your veterinarian. After an examination, home care can begin with brushing. Daily chewing activity is also important to keep your pet's teeth clean. All chews and toys should be given with supervision as some pets are prone to swallowing large pieces or gulping down treats that are designed to be slowly chewed.
